ANNUAL REPORT

U. S. DEPARTMENT OF AGRICULTURE — ASCS

F O R E W O R D

Administration of action programs in the most complex and widespread industry in this nation is the challenge accepted by those elected and appointed officers of ASCS. Soil and water, production and maintenance, stabilization and conservation, resources and labor, capital and technology--all of these contribute to a viable agriculture.

It is small tribute to list simply the units and dollar value of ASCS programs when so much effort has gone into their accomplishment. Nevertheless, from the following pages, it is not hard to determine both motivation and incentives have been aided through program payments. Agricultural producers in the State of Washington have contributed both to the nation's goal of a continuous supply of food and fiber at reasonable prices to the consumer and the attainment of program objectives.

1966 VOLUNTARY WHEAT PROGRAM PAGES 1 - 40

The objective of the Wheat Program is to maintain production at levels that will satisfy current needs, provide adequate reserves, and maintain or increase the level of farm income.

The wheat allotment for 1966 was set nationally at 47,800,000 acres, which was the lowest wheat allotment since allotments were established in 1954. In the State of Washington the wheat allotment for 1965 was 1,839,645 acres and for 1966 it was 1,792,799 acres.

In 1966 the farmers were required to divert 15% of their farm allotment to a conserving use for which no payment was made, while in 1965 they were required to divert 10% of the allotment acres. Producers could divert up to 50% of their allotment to a conserving use and receive a payment at 40% of the loan rate times the projected yield. Payments amounting to \$246,647 were paid to producers on this part of the program.

Substitution of wheat on barley and oat-rye bases was permitted and was used quite extensively in the wheat counties.

The certificate payment was \$1.32 per bushel, which was calculated on the difference between parity on July 1, 1966 and the National price support loan rate of \$1.25 ($\$2.57 - \$1.25 = \1.32).

Producers were paid on the basis of 45% of the farm allotment times the projected yield times \$1.32.

These payments amounted to \$39,726,274.

1966 FEED GRAIN PROGRAM PAGES 41 - 80

This program assisted farmers to maintain their income from barley, corn and grain sorghums for which temporary cuts are desirable because of large carryover stocks in storage.

In 1966 a farmer who participated was required to divert 20% of his feed grain base to conserving uses. On farms which had a base of more than 25 acres, he was not paid for diverting this acreage. However, a farm with a base of 25 acres or less was paid for diverting 20% of the base on a minimum rate and those acres in excess of the 20% were paid at a maximum rate.

The number of acres diverted under the 1966 program were 39,379 acres and diversion payments amounted to \$1,423,593. A price support payment (corn - 30¢ per bushel, grain sorghums - 29.68¢ per bushel and barley - 20¢ per bushel) was also made on the actual number of acres of feed grain up to 50% of the feed grain base (acres times projected yield times price support payment rate). These payments amounted to \$634,435.

STATE OF WASHINGTON

SUMMARY OF THE 1966 WHEAT PROGRAM

| Item | Unit | Extent |
|------|------|--------|
|------|------|--------|

Section 1 - Wheat Farms and Allotments

| | | |
|--|---------|-----------|
| Farms with Wheat Allotments | Number | 16,803 |

| At the Corn Rate | Dollars | 103,539 |
| At the Grain Sorghums Rate | Dollars | 1,100 |
| At the Barley Rate | Dollars | 12,324 |

Price support operations are conducted in the name of and financed by Commodity Credit Corporation. Any price support program must be approved by the Board of Directors of CCC and the Secretary of Agriculture. Administration of CCC programs is a responsibility of ASCS.

Price support operations in the field involving direct dealings with farmers are a responsibility of State and County ASC Committees. County office personnel assist the farmer in the preparation of price support documents, check eligibility for price support, and adequacy of farm storage facilities.

Support is achieved through loans, purchases, and payments for some commodities at announced levels. For most commodities, loans are made directly to producers on the unprocessed commodity through ASCS county offices. Smaller amounts of many are purchased from producers.

Price-support loans to producers are "nonrecourse." If market prices rise above support prices, producers can pay off their loans and market their commodity. If market prices fail to rise above support prices, producers can deliver the commodity to CCC, with appropriate adjustments for quality and quantity, and discharge their obligation in full.

Support loans and purchases give farmers a ready means of promoting more orderly marketing, particularly in periods when bountiful harvest supplies threaten to push prices of farm commodities down to unfair levels. When supplies are excessive, stocks are built up in supporting farm commodity prices. These stocks are in turn released into the market as needed to stabilize supplies and prices.

Eligibility for price-support loans, purchases and payments, and for wheat marketing certificates is conditioned on participation in allotment or commodity acreage diversion programs for that particular crop.

The following tables indicate the number and type of loan, quantity placed under loan, repaid, forfeited to CCC, and the amount of farm-stored resale.

A substantial part of the grain placed under price support loan each year is held in farm storage on the farms where it is produced. To encourage increased farm storage, CCC makes loans to farmers to finance new farm storage facilities for the storage of price-supported commodities. The program was inaugurated in June 1949. Nationally these loans made for construction of farm storage facilities totaled \$252,717.724 for a capacity of 886,865,584 bushels from the inception of the program through June 30, 1967.

In the State of Washington, since 1955, loans for construction of 801 farm storage facilities, with a capacity of 6,079,425 bushels have been approved by county committees. Loans made under this program are administered by County ASC Committees.

Disbursements are made by CCC Sight Drafts, and all repayments are made to the County ASCS Office. A producer may borrow up to 85 percent of the cost of the new storage bins. Repayment of the loans are made in four equal installments, with the first installment payable 12 months after disbursement. Interest is at the rate of 4 percent per annum on the unpaid balance.

All facility loans made in this State have been in Eastern Washington counties for the storage of price-supported grain commodities.

The following tables indicate the activity in the 1966 Farm Storage Facility and Mobile Dryer Loan Programs in the State of Washington.

The Wool Program, administered by the Agricultural Stabilization and Conservation Service, is an incentive program to increase production. It is authorized by the National Wool Act of 1954, which directs that wool production at a yearly level of 300,000,000 pounds should be encouraged as a measure for our national activity and in promotion of the general economic welfare.

To encourage this production a support level of 65 cents per pound has been established for the 1966 marketing year. The net price received by wool producers throughout the Nation for the wool marketing year is determined. The rate of incentive payment then is computed, which increases the national net price received by producers to the 65 cents per pound support level. Payments are made to wool growers by applying this percentage to the net price received for the shorn wool marketed by the individual producer. The percentage rate of payment for 1966 is 24.8%.

The rate of unshorn lamb payment is set in relation to the wool incentive payment. The rate of payment for 1966 unshorn lambs is 52 cents per hundredweight of unshorn lambs sold.

The following tables indicate the 1966 Wool Program in Washington State for Shorn Wool and Unshorn Lambs.

The Food and Agriculture Act of 1965 authorized a new long-term Cropland Adjustment Program. It is a voluntary program designed to help farmers producing crops in surplus supply to enter into long-term agreements.

Farmers participating may remove cropland from production for periods of from five to 10 years. The diverted cropland is put to conservation, recreational, and open space uses. The program also emphasizes assistance to farmers, who because of age, off-farm employment, or other personal adjustment reasons, desire to reduce their farming operations.

Accepted agreements are paid at a rate determined by the crop diverted and in productivity of that crop on the farm. Cost-sharing for carrying out needed conservation uses is allowed at approximately 50 percent of the cost.

Under Greenspan provisions, the program offers local, State and other governmental agencies assistance in acquiring cropland and establishing practices to meet their open space needs.

Seventy 1966 CAP contracts were approved in this State, with annual adjustment payments amounting to approximately \$110,000.00.

The following tables indicate the 1966 program participation in this State.

The United States Sugar Program has a three-fold purpose:

- (1) To protect the welfare of the U. S. sugar industry.
- (2) To provide U. S. consumers with ample sugar supplies at reasonable prices.
- (3) To promote and strengthen the export trade of the United States.

To encourage the continued domestic production of sugar in this country, conditional payments are made to producers in return for their compliance with the production adjustment and other provisions of the program.

To be eligible for sugar payments, growers must plant within their proportionate shares, when restrictive shares are in effect, pay field workers in full for work performed at rates not less than those determined by the Secretary of Agriculture to be fair and reasonable, and must not employ children under the age of 14 or permit children between 14 and 16 years of age to be employed for or permitted to work for more than 8 hours a day.

The payment rate is the basic 0.8 cents per pound of sugar commercially recoverable, raw value, \$16.00 per ton on the first 350 short tons. This rate is reduced by successive steps to a minimum of 0.3 cents per pound on production over 30,000 tons.

The program also gives benefits to growers in the form of special conditional payments for crop deficiency or abandonment caused by drought, flood, storm, freeze, disease, or insects.

Payments to producers are financed out of the general funds of the Treasury. However, sugar taxes (an excise tax of one-half cent per pound, raw value, on all sugar marketed within the quota system) provide funds for the Treasury which more than offset all costs of this program.

Proportionate shares, when in effect, and payments to growers are made by ASC County Committees.

The following tables present the data relative to participation, production and payments in the 1966 Sugar Beet Program.

The Conservation Reserve Program is a voluntary program.

The specific objective of the Conservation Reserve Program is to assist farmers to divert some of the land currently being used for the production of agricultural commodities into a program of soil, water, forests, and wildlife conservation uses. Authorization to accept long term contracts (3-5-10 years at the producer's option) under this program ended with the 1960 program year. Producers who entered into contracts in 1960 or a previous year will earn annual payments for the length of their contract period.

AGRICULTURAL CONSERVATION PROGRAM PAGES 101 - 180

Conservation, man's efforts to use the resources of his environment to satisfy his needs, without spoiling its capability to go on satisfying those needs. Conservation concerns everyone and is everyone's responsibility.

The Agricultural Conservation Program is part of a coordinated effort to promote land use and management in accordance with its capabilities after taking into account the present and future requirements of society. The whole effort includes research, education, technical assistance, cost-sharing and such indirect aids as credit.

Through the ACP, the Federal Government shares with farmers the cost of carrying out approved soil-building and soil and water conservation practices, including related wildlife conservation practices. Cost-sharing provided farmers through the ACP represents about 50 percent of the total cost of performing the practice.

The following State summary and individual county reports contains detailed data on participation, practice performance, and Federal cost-sharing during the 1966 Program Year.

COMPLIANCE PAGES 181 - 185

Compliance in a general sense is not a program such as ACP, Conservation Reserve, Price Support or Acreage Allotments. Compliance is a term used to designate that part of the operations of our service which develops facts and figures to be used by the county committee in determining a producer's eligibility to share in program benefits. Compliance by certification is the acceptance of a farmer's report, based on his certification of his program participation. The accuracy of such reports is subject to an intensive spot check.

The success of any of our programs can be gauged only on the extent of farmer participation and such is the ultimate function of the compliance operations in ASCS.

CROPLAND CONVERSION PROGRAM PAGE 186

The Cropland Conversion Program is a voluntary program. In 1963 the program was made available on a pilot project basis. Island and Chelan counties received approval for pilot projects. For the years 1964-66 the program was made available in Spokane County.

The program is designed to help farmers convert land regularly used in the production of row crops, small grain and land devoted to tame hay to income-producing recreational use, farm forests, water storage and wildlife habitat. Farmers entering into Cropland Conversion Agreements (3-5-10 years, at the producers option) received an adjustment payment for land converted to approved conservation uses. Cost-sharing is also authorized for conservation practices installed during the period of agreement to conserve and develop soil, water, forests, wildlife, and recreation resources.

1963 - 1966

CROPLAND CONVERSION PROGRAM

January 1, 1967

| County | Number of Agreements | Acres on Agreements | Compensation |
|---------|-------------------------|------------------------|--------------|
| Chelan | 1 | 90 | \$ 1,920 |
| Spokane | 49 | 1,985 | 91,026 |
| TOTAL | 50 | 1,985 | \$ 92,946 |

1967 FISCAL YEAR OPERATING EXPENSES

County office operating expenses amounted to \$1,344,785.00 during Fiscal Year 1967. This amount includes salaries of county personnel and committee-men, rent utilities, personnel benefits and supplies. It does not include expense for which the county office was reimbursed by producers or another Federal Agency.

The volume of work accomplished in each office is measured through a workload study system. Each item of work is assigned a weighted factor based on the amount of time it takes to do the job. This factor, times the volume of work in each county, results in the total workload points for a county.

The following table shows the cost of operation in each county office as compared to their work volume.

| <u>County</u> | <u>Workload Points</u> | <u>Operating Costs</u> |
